

# How can **digital interventions** help tackle diabetes, cardiovascular diseases, and depression in LAC?

Evidence & potential social returns

September 13<sup>th</sup>, 2022

# The Challenge

Source: IHME's Global Burden of disease 2019

- **Increasing share of NCD's** in GBD in the region (77%).
- 35% of deaths in the region – **2.5 million** – are potentially avoidable
- NCDs account for **4 of the 5** leading causes of death for potentially avoidable premature mortality in the Region

# The Challenge

## »» 40 Million DALYS

### Due to Cardiovascular Diseases

35% of hypertension cases are undiagnosed in LAC  
Men are more affected than women

## »» 62 Million People

### Have Diabetes in the Americas

30-40% of cases are undiagnosed & 50-70% are uncontrolled

## »» 70% Treatment Gap

### Mental healthcare in LAC

Depression 2x more likely in women than men

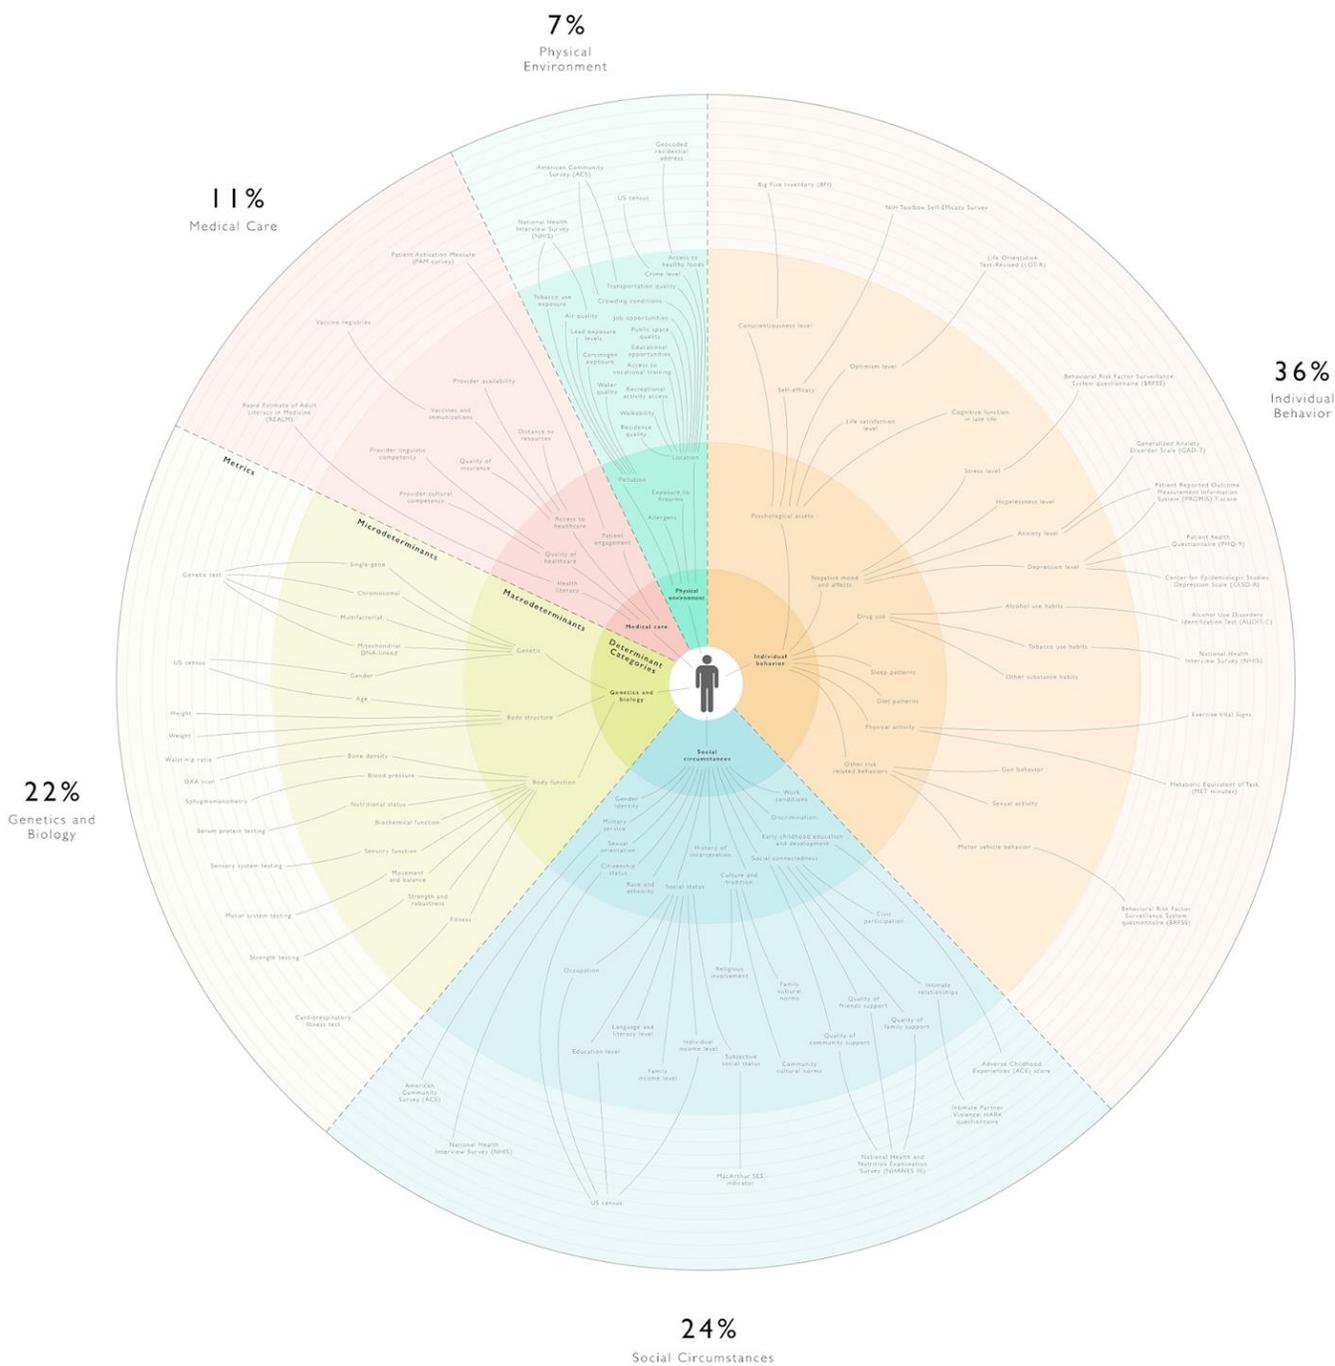

# Economic Burden of NCDs Globally

»» **30 Trillion**  
**NCDs will cost the world economy US\$30 trillion** between 2011-2031, which is equivalent to almost **half (45%) of the global GDP**

Fuente: World Economic Forum & Harvard School of Public Health, 2011

»» **15%**  
Diabetes consumes up to **15%** of national health care budgets

Zang, 2010

Almost  
**90%** of health  
 is determined  
 outside of the  
**health center**

# How can digital health help?

## Challenge

Early detection

Limited human resources

Risk factor reduction

Coordination of care

## Digital interventions

Digital screening tools

Digital task shifting  
Telehealth

Apps for self-care & self-management

Electronic health records,  
information exchange

# How can digital health help?

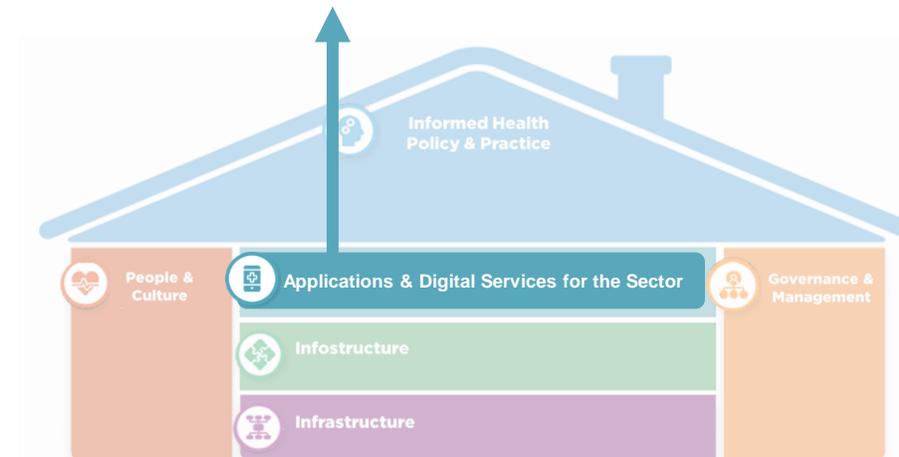

## Applications & Digital Services for the Sector

**Example 1**

# Digital interventions for depression treatment

Only  
**27% of major  
depression cases  
receive treatment**  
in LAC countries

(PAHO, 2014)

# Challenges for treating depression in LAC

## Situation in LAC

Limited supply of human resources

Only 2% of national health budgets spent on mental health

Stigma hampers demand for services

Gap of untreated cases likely to have grown

# How can digital interventions help?

## Evidence from the literature

### Teletherapy

- Is as effective as in-person therapy for several mental health conditions
- Reduces barriers to access such as distance and stigma

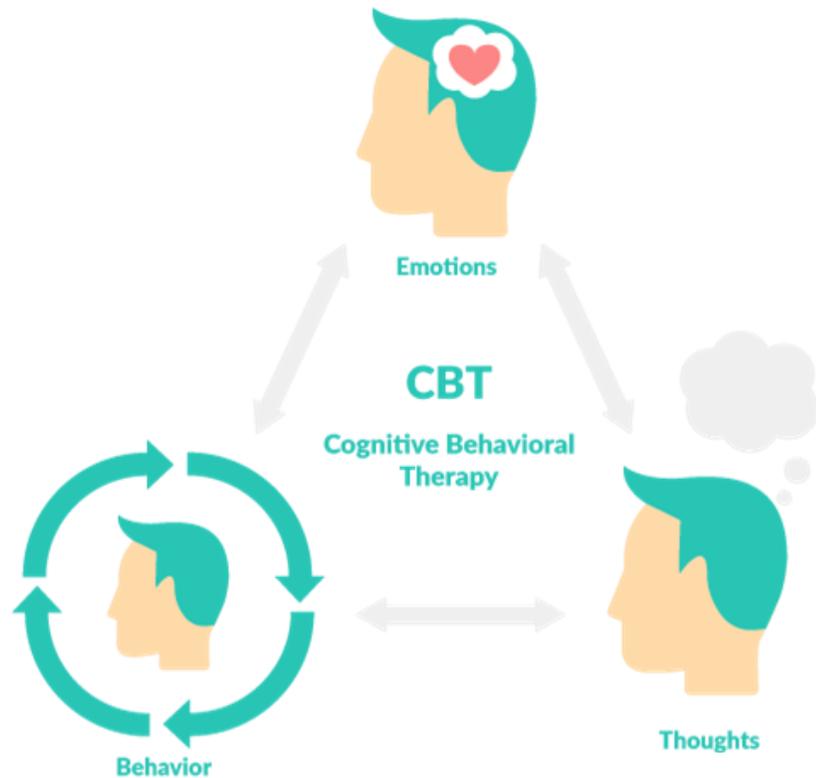

### Cognitive Behavioral therapy (CBT)

- Digital modalities of CBT can be as effective as traditional ones and improve worker productivity

# What is cognitive behavioral therapy?

## Cognitive behavioral therapy (CBT) definition

- Focuses on skill development to alter unproductive thoughts and modify behavior
- Time-bounded
- Large body of evidence on its effectiveness
- Recommended as a first line of treatment by WHO

# Can depression therapy be delivered digitally?

Cognitive behavioral therapy (CBT) delivery methods

## Face-to-face / Telephone

Prescribe CBT

# Key takeaways

- All alternatives of **CBT provide value to society**
- A mix of **modalities could be useful** for access & equity considerations
- **iCBT for LAC will require adapting, testing, and regulation** on digital therapeutics

## Example 2

# Digital interventions for diabetes & cardiovascular diseases

# How can digital interventions help?

## Evidence from the literature

### Screening

- SMS can increase uptake of screening among patients at-risk
- Mobile-based tools can increase screening capacity for cardiovascular diseases

### Prevention

- SMS can reduce the onset of diabetes among prediabetic patients
- Digital interventions can help reduce some risk factors

### Management

- Reminders can improve medication adherence
- Telemedicine can improve outcomes for patients with CVD

# Can digital interventions prevent diabetes?

Traditional vs. Digital Interventions to reduce weight & increase physical activity

**Increase physical activity**

**Reduce weight**

# Key takeaways

- **Tailored messages** for those at risk can be effective
- **High-quality content** is key
- Necessary to think **seriously about uptake**
- Interventions for risk reduction have **multiple commonalities with other NCDs**

# Main conclusions

# Conclusions

- Digital applications can help tackle **non-communicable diseases and mental health**
- Substantial **gains come from digital** task-shifting
- Not all apps/digital **interventions are created equal**
- Research for the **LAC context is necessary** to adapt and test
- **Digital foundations** are essential
- **No silver bullets**

# Experiences from the region
